

IN YEAR 2

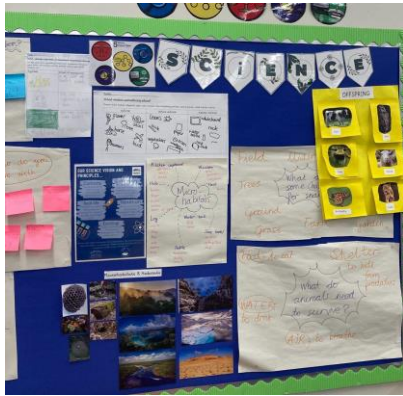

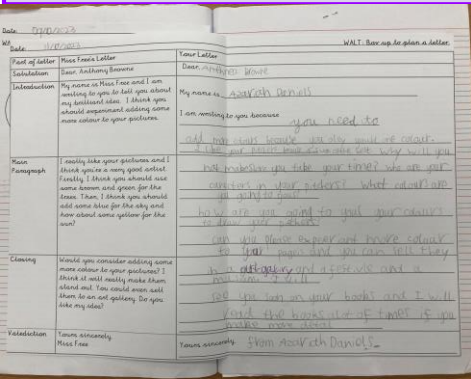

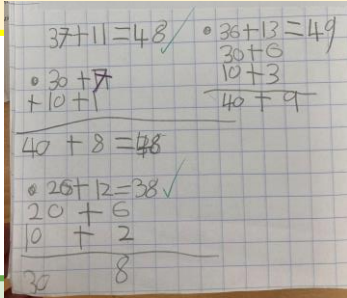

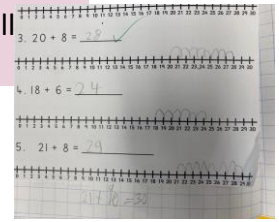

Children in Year 2 wrote letters to an author they enjoyed reading over the past term. They were tasked with persuading the author to write a story about a topic of their choice.

THIS MONTH'S SUPER LEARNERS:

Azariah- For having such a wonderful attitude towards learning, especially when solving addition and subtraction activities. Keep it up!
Jiho- He has been an excellent role model. He gets on with his work and contributes in lessons with great enthusiasm. Well done!

In Kings and Fitzwilliam class, children have been busy working on addition and subtraction using two 2-digit numbers. They started their learning journey by adding using a number line and are now moving to adding and subtracting using the expanded column method.

In science, we continued to explore habitats in our local environments. We investigated microhabitats found around our school and identified the features of that habitat that would allow animals to survive. The children explored and built food chains and identified the offsprings of animals. They also considered the question, 'Do all offspring look like their mothers?'
