

in Year 6

In Science this month, we have continued to learn about the circulatory system whilst focusing on our enquiry skills. We have learned about how our understanding of the human body has changed over time. William Harvey and Galen were the two scientists in particular we focused on and we considered how their research changed medical treatments. Finally, we looked at micro-organisms and conducted an experiment to find out the best way to preserve foods.

In Art, we have been using different media to extend a segment of David Hockney's work, 'The Forest'.

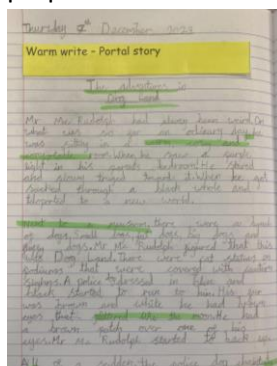

In History we have continued to learn about the Second World War. A highlight of this month was the opportunity for children to hear the testimony of Bob Kirk who spoke to the children about his journey from Germany to Britain on the Kindertransport trains. In our Geography learning, we looked at which British cities were targeted the most by the Nazis and considered why this was the case.

In Computing, we continue to develop our websites using Google Sites – adding links between webpages and links to other websites.

In English, we have focused on creating a portal story. In our writing, we focused on vivid setting description that paints a picture for the reader. We challenged ourselves to use ambitious adjectives, similes and personification. Alongside this, in our grammar lessons, we have been learning about the subject and object of a sentence, the perfect tense and prepositions.

In Maths, our focus has been on decimals, fractions and percentages. We have practiced the four operations when handling decimals: adding, subtracting, multiplying and dividing. This also included giving a remainder of a division as a decimal. In the past week, we have been converting decimals to percentages and using our skills to solve practical problems involving finding percentages of amounts.
