

in Year 6

In Science, we have continued to learn about the circulatory system whilst focusing on our enquiry skills. We have conducted a fair test to investigate the effect of exercise on our respiration rate. Also, we have used comparative testing to explore what foods have a higher fat content.

Remembrance Day art!

In History, we have continued to learn about the Second World War, focusing on the role of women and the treatment of Jewish people at the beginning of the war. We learnt that Queen Elizabeth II also played an important role as a mechanic in the war! As a class, we have considered how the women's important contributions to the war efforts then led to more equal opportunities for women after 1945.

Computing has been a huge highlight this month! Using Google Sites, we're beginning to build our own websites.

In English, we have focused on creating a news report. In our writing, we practised adjusting our style to fit the formal tone that a report should have; using journalistic vocabulary and, considering the purpose of our writing. After studying our model text 'The Terror of Trumpington', and real examples of news articles, we had a go at using a similar style to write our own.

In Maths, our focus has been on fractions. We have consolidated and extended our skills from Year 5. We have practiced simplifying and comparing fractions. As well as this, we have added, subtracted, multiplied and divided by fractions. Finally, we have found decimal equivalents for fractions and found fractions of amounts.
