

## Trumpington Federation calculation policy

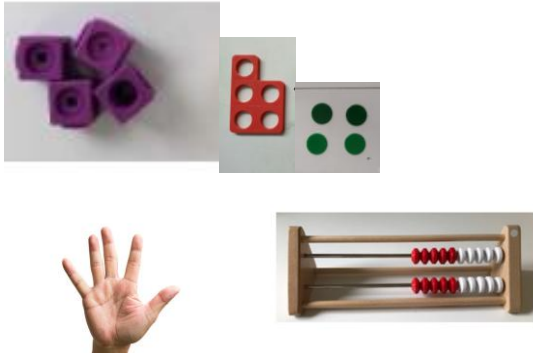

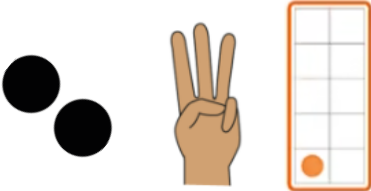

### Vision

For our children to feel confident, wanting to give it a go, when solving a mathematical problem that they haven't seen before.

### Introduction

The purpose of this calculation policy is to ensure consistency and progression in the teaching of maths and the use of different manipulatives, representations and calculation methods across the school from EYFS to Year 6. It aims to give an overview of the key calculation strategies for addition, subtraction, multiplication and division. Our intention is that our children will be flexible with the methods that they use to perform different calculations.

Early Years: for further information on the approach to the teaching of Maths in the Early Years please see the document 'Early Years Approach to Teaching Maths'.

EYFS		
Concrete	Pictorial	Abstract
<p><b>Objects, Cubes, Counters, Numicon and Fingers</b> Use a range of resources to subitise numbers.</p> 	<p>Use pictures to subitise numbers.</p> 	

### Objects, Cubes, Counters, Numicon and Fingers

Use a range of resources to automatically recall number bonds, double facts and related subtraction facts.

Five and three makes eight.

**OR** Eight is made of five and three. Five and three is eight.

### Part-whole model

Three and three makes six.

**OR** Six is made of three and three. Three and three is six.

Five and two makes seven.

### Tens frames and Part-whole model

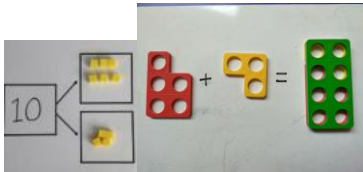

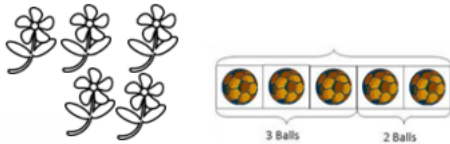

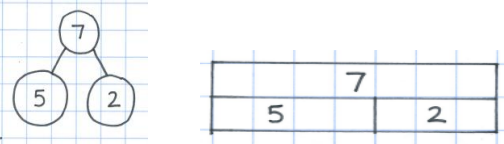

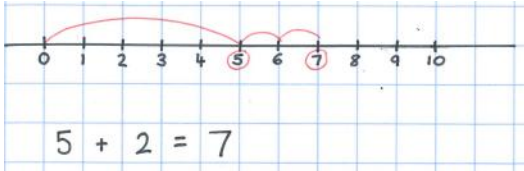

5 is made from 3 and 2

3 and 3 makes 6.

5 is made up of 3 and 2.

## Addition

Year 1		
Concrete	Pictorial	Abstract
<p><b>Cubes and Numicon</b></p> <p>Use Cubes and Numicon to add two numbers together as a group, on a part-whole model or in a bar.</p>   	<p>Use pictures to add two numbers together as a group or in a bar.</p>  <p><b>Part-whole model and Bar model</b></p> <p>Children are shown how the number sentence can be represented in a part-whole model and on a bar model. <i>Please note that the models can be shown in different orientations.</i></p> 	<p>Use the part-whole diagram or bar model to move into the abstract.</p> <p><math>5 + 2 = 7</math></p> <p><math>7 = 5 + 2</math></p>
<p><b>Bead strings</b></p> <p>Start with the larger number on the bead string and then count on to the smaller number 1 by 1 to find the answer.</p> 	<p><b>Number lines</b></p> <p>Initially, children are taught to start at the biggest number.</p> <p>As they grow in confidence, children start to explore starting with the smallest number to develop an understanding of commutativity.</p> 	<p>Place the larger number in your head and count on the smaller number to find your answer.</p> <p><math>5 + 2 = 7</math></p> <p><math>7 = 5 + 2</math></p>
<p><b>10s frame and Bead strings</b></p>	<p><b>Number lines</b></p> <p>Use pictures or a number line. Regroup or partition the smaller number using the part-</p>	<p>If I am at seven, how many more do I need to make 10. How many more do I add on now?</p>

Start with the bigger number and use the smaller number to make 10 using bead strings and 10s frames.

whole model to make 10.

$$7 + 4 = 11$$

## Year 2

### Concrete

#### Dienes and Bead strings

Model using Dienes and Bead strings.

#### Part-whole model with Dienes

### Pictorial

3 tens + 5 tens = \_\_\_\_ tens

30 + 50 = \_\_\_\_

Use representations for Dienes.

Jack has 22 sweets. Here are Sophie's sweets:

How many sweets do they have altogether?

#### Part-whole model and Bar model

Children are shown how the number sentence can be represented in a part-whole model and on a bar model.

### Abstract

Move into the abstract.

$$56 + 13 = 69$$

$$13 + 56 = 69$$

$$69 = 56 + 13$$

$$69 = 13 + 56$$

### Number lines

Switch to a partially empty number line (e.g. with multiples of 5, 10).

As children become more confident with their number bonds their number line strategies will progress.

$$56 + ? = 69$$

$$? + 13 = 69$$

$$69 = 56 + ?$$

### 10s frame

Use 10s frames to make 10

### Part-whole model and Number line

Use part-whole model and number line to model.

$$17 + 5 = 22$$

$$17 + 5 = ?$$

$$17 + 3 = 20$$

$$20 + 2 = 22$$

### CONCRETE

#### **Dienes**

Model partitioning using Dienes.

### PICTORIAL

#### **Partitioning**

Children are shown how to partition numbers into tens and ones and then add them.

### ABSTRACT

#### **Partitioning**

Children are shown how to partition numbers into tens and ones and then add them.

$$\begin{array}{l} 56 + 13 = 69 \\ 50 + 10 = 60 \\ 6 + 3 = 9 \\ 60 + 9 = 69 \end{array}$$

#### **Expanded column method**

Building on from partitioning, children are shown how to set up the 10s and 1s in columns. They are taught to add the 1s first.

$$\begin{array}{r} 56 + 13 = 69 \\ 50 + 6 \\ + 10 + 3 \\ \hline 60 + 9 \end{array}$$

Here is an example where the 1s exceed 9.

$$\begin{array}{r} 56 + 15 = 71 \\ \begin{array}{r} 10 \\ 50 \end{array} + 6 \\ + \begin{array}{r} 10 \\ 5 \end{array} \\ \hline 70 + 1 \end{array}$$

### Year 3

#### Concrete

##### Dienes and Counters

Model using Dienes and Counters. Add together the ones first then the 10s then the 100s.

#### Pictorial

##### Place value chart

Children move to drawing the counters using a place value chart with 100s, tens and ones.

tens ones

Children can draw a representation of the grid to further support their understanding, carrying the ten underneath the line.

#### Abstract

##### Expanded column method

Children are shown how to set up the 100s, 10s and 1s in columns, showing the full value of each digit. They are taught to add the 1s first.

$$\begin{array}{r} 356 + 213 = 569 \\ 300 + 50 + 6 \\ + 200 + 10 + 3 \\ \hline 500 + 60 + 9 \end{array}$$

$$\begin{array}{r} 366 + 263 = 629 \\ 300 + 60 + 6 \\ + 200 + 60 + 3 \\ \hline 600 + 20 + 9 \end{array}$$

##### Compact column method

Building on from the expanded column method, children are shown how to set up an addition by putting their 100s, 10s and 1s in the correct place value column. They are taught to add the 1s first.

Model exchanging 10 ones for a ten and 10 tens for a hundred using Dienes and Counters.

### Number lines

Switch to an empty number line to increase flexibility and speed and allow demonstration of understanding.

Children are shown how the number sentence can be represented in a part-whole model and on a bar model.

$$\begin{array}{r} 356 + 213 = 569 \\ 356 \\ + 213 \\ \hline 569 \end{array}$$

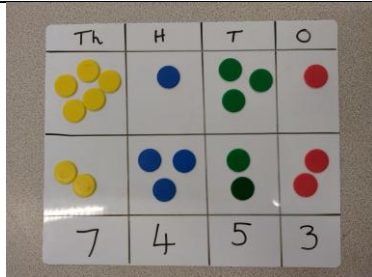

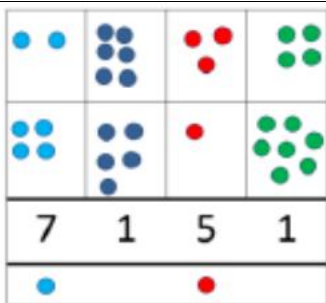

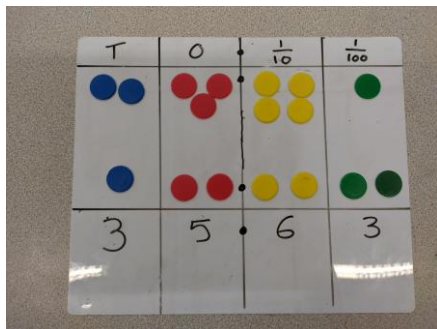

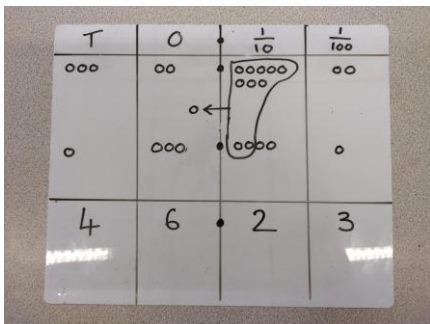

### With exchanging

$$\begin{array}{r} 357 + 213 = 570 \\ 357 \\ + 213 \\ \hline 570 \end{array}$$

## Year 4

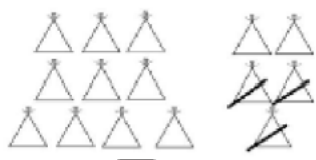

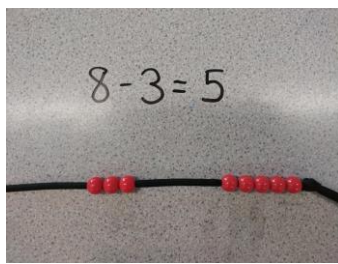

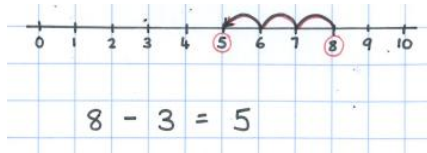

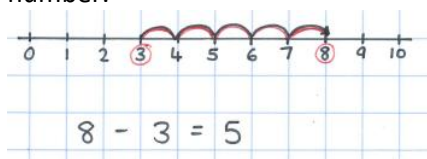

Concrete	Pictorial	Abstract
<b>Counters</b> Children continue to use Counters to add, exchanging ten ones for a ten and ten tens for a hundred and ten hundreds for a thousand.	<b>Place value chart</b> Children draw representations using a Place value chart.	Children consolidate their learning from previous years. They continue to be shown how to use the expanded and the compact column method. <b>[Children to be shown how to use the compact column method when adding decimals]</b>

	<div data-bbox="831 154 1155 458"></div> <p>Children consolidate their learning from previous years.</p> <p>They continue to be shown how to use a blank number line and how the number sentence can be represented in a part-whole model and on a bar model.</p> <p><b>[Children to be shown how to use the number line when adding decimals]</b></p>	
Year 5		
Concrete	Pictorial	Abstract
<p><b>Counters</b></p> <p>Include decimal Counters and model exchange for addition.</p> <div data-bbox="201 1090 636 1420"></div>	<p><b>Place value chart</b></p> <p>Children draw representations using a Place value chart.</p> <div data-bbox="824 1090 1252 1415"></div>	<p>Children consolidate their learning from previous years.</p> <p>They continue to be shown how to use the expanded and the compact column method.</p> <p><b>[Children to be shown how to use the compact column method when adding decimals]</b></p>

	<p>Children consolidate their learning from previous years.</p> <p>They continue to be shown how to use a blank number line and how the number sentence can be represented in a part-whole model and on a bar model.</p> <p><b>[Children to be shown how to use the number line when adding decimals]</b></p>	
<b>Year 6</b>		
As Year 5 with increasingly larger and more complex numbers and decimal values.	As Year 5 with increasingly larger and more complex numbers and decimal values.	As Year 5 with increasingly larger and more complex numbers and decimal values.

## Subtraction

Year 1		
Concrete	Pictorial	Abstract
<p><b>Physical objects, counters, cubes</b></p> <p>Use physical objects, counters, cubes etc to show how objects can be taken away.</p> 	<p>Cross out drawn objects to show what has been taken away.</p>  <p><math>15 - 3 = 12</math></p>	<p><b><math>15 - 3 = 12</math></b></p>
<p><b>Bead strings</b></p> <p><b>Take away</b></p> <p>Move the beads along the bead string one by one as you count backwards.</p>  <p><b>Find the difference</b></p> <p>Children learn that it is possible to find the difference by counting forwards from one number or counting back from the other number.</p>	<p><b>Number lines and part-whole model</b></p> <p><b>Take away</b></p> <p>Count back in ones using a number line.</p>  <p><b>Find the difference</b></p> <p>Children learn that it is possible to find the difference by counting forwards from one number or counting back from the other number.</p> 	<p><b><math>8 - 3 = 5</math></b></p> <p>Put 8 in your head, count back 3. What number are you at now?</p> <p><math>5 + ? = 8</math></p> <p><math>8 - ? = 5</math></p> <p><math>5 = 8 - ?</math></p>

	<p>Children are shown how the number sentence can be represented in a part-whole model and on a bar model.</p> 	
<p><b>Cubes</b> Compare objects and amounts.</p>  <p>Lay objects out to represent a bar model.</p> 	<p><b>Bar models</b></p>  <p><math>5 - 3 = 2</math></p> 	<p>Hannah has 12 sweets and her sister has 5. How many more does Hannah have than her sister.?</p>
<p><b>Cubes and Numicon</b> Use Cubes and Numicon to find the difference on a part-whole model.</p>	<p><b>Part-whole model</b> Use pictorial representations to show the part.</p>	<p><b>Part-whole model</b> Use the part-whole diagram to move into the abstract.</p>

This can also be done with Numicon.

$$8 - 3 = 5$$

### 10s frame and Bead strings

Make the number on the 10s frame or bead string then take away to make ten. Then, take the rest away.

$$14 - 5 = 9$$

$$14 - 4 = 10$$

$$10 - 1 = 9$$

### Number line

Jump back 3 first to make 10 and then 4 more. Use ten as the stopping point.

How many do we take off first to get to 10?  
How many left to take off?

$$16 - 8 = ?$$

Year 2

Concrete

Pictorial

Abstract

### Dienes

Children are shown how to change a ten into ten 1s and then take away.

$$20 - 4 = 16$$

$$20 - 4 =$$

$$20 - 4 = 16$$

### Dienes

Children are shown how to make the larger number using Dienes and then take away (remove) the smaller number. Children should also be taught how to exchange (please refer to Year 3).

### Part-whole model

Children are shown how to partition numbers using a part-whole model into tens and ones and then subtract them.

### Partitioning

Children are shown how to partition numbers into tens and ones and then subtract them.

$$\begin{array}{r} 78 - 45 = 33 \\ 70 - 40 = 30 \\ 8 - 5 = 3 \end{array}$$

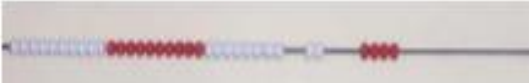

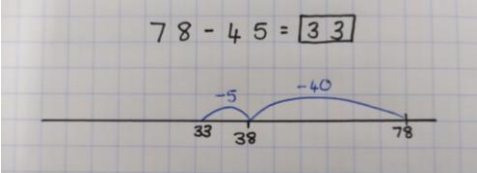

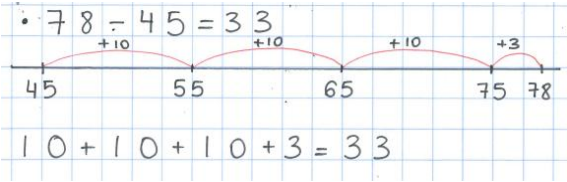

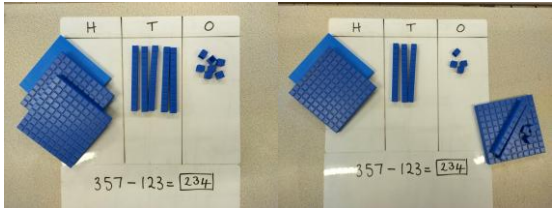

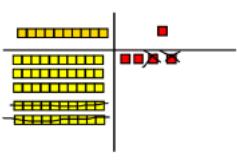

### Expanded column method

Building on from partitioning, children are shown how to set up the 10s and 1s in columns with the larger number on the top. They are taught to subtract the 1s first.

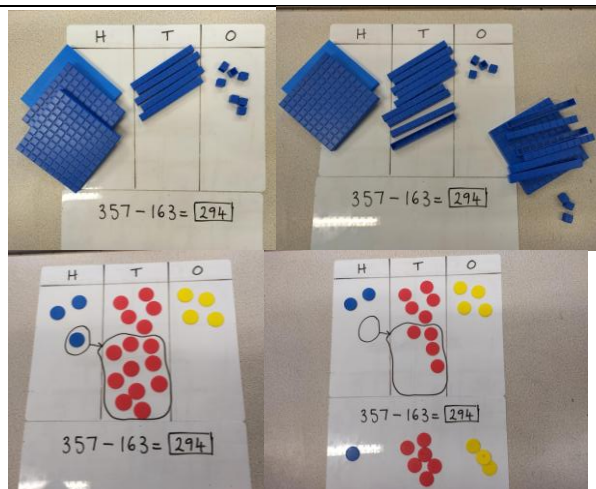

$$\begin{array}{r} 78 - 45 = 33 \\ 70 \quad 8 \\ - 40 \quad 5 \\ \hline 30 \quad 3 \end{array}$$

Here is an example with exchanging.

$$\begin{array}{r} 75 - 48 = 27 \\ 60 \quad 15 \\ 70 \quad 5 \\ - 40 \quad 8 \\ \hline 20 \quad 7 \end{array}$$

<p><b>Bead strings</b> Children are shown how to take away and how to find the difference using bead strings and the next ten strategy.</p> <p><math>34 - 6 = 28</math></p> <p><math>34 - 4 = 30</math> <math>30 - 2 = 28</math></p> 	<p><b>Number lines</b> Switch to a partially empty number line (e.g. with multiples of 5, 10).</p> <p><b>Take away</b></p>  <p><b>Find the difference</b></p> 	<p><b><math>78 - 45 = 33</math></b></p>
<p><b>Year 3</b></p>		
<p><b>Concrete</b></p>	<p><b>Pictorial</b></p>	<p><b>Abstract</b></p>
<p><b>Dienes and Counters</b> Model using Dienes and Counters and taking away.</p> 	<p>Draw representations to support understanding of taking away by crossing out.</p> 	<p><b><math>54 - 22 = 32</math></b></p>
<p><b>Dienes and Counters</b> Model exchanging a hundred for 10 10s and ten for 10 1s using Dienes and Counters.</p>	<p>Children to draw or be shown Dienes or Counters.</p>	<p><b>Expanded column method</b> Children are shown how to set up the 100s, 10s and 1s in columns, showing the full value of each digit with the larger number on top. They are taught to subtract the 1s first.</p>

### Number lines

Switch to an empty number line to increase flexibility and speed and allow demonstration of understanding.

### Take away

### Find the difference

$$876 - 625 = 251$$

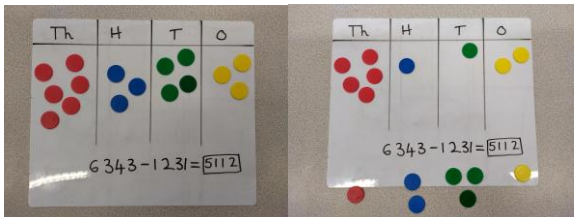

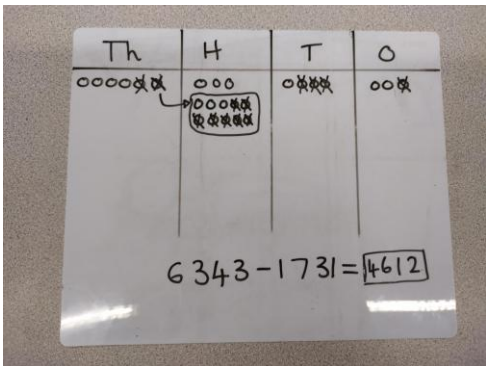

### Compact column method

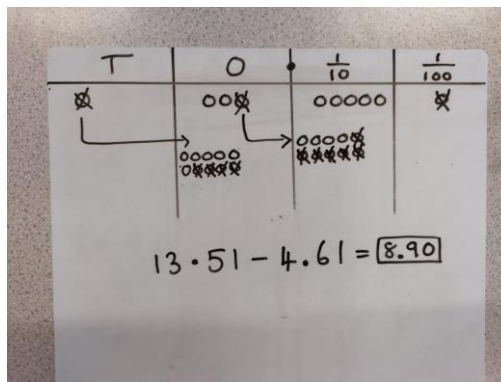

Building on from the expanded column method, children are shown how to set up a subtraction putting their 100s, 10s and 1s in the correct place value column. They are taught to subtract the 1s first.

$$\begin{array}{r} 876 \\ - 625 \\ \hline 251 \end{array}$$

### With exchanging

$$\begin{array}{r} 876 \\ - 627 \\ \hline 249 \end{array}$$

	Children are shown how the number sentence can be represented in a part-whole model and on a bar model.	
<b>Year 4</b>		
<b>Concrete</b>	<b>Pictorial</b>	<b>Abstract</b>
<p><b>Counters</b> Children continue to use Counters to subtract, exchanging a thousand for ten 100s and a hundred for ten 10s etc.</p> 	<p><b>Place value chart</b> Children draw representations using a Place value chart and show their exchange.</p>  <p>Children consolidate their learning from previous years.</p> <p>They continue to be shown how to use a blank number line and how the number sentence can be represented in a part-whole model and on a bar model.</p> <p><b>[Children to be shown how to use the number line when subtracting decimals]</b></p>	<p>Children consolidate their learning from previous years.</p> <p>They continue to be shown how to use the expanded and the compact column method.</p> <p><b>[Children to be shown how to use the compact column method when subtracting decimals using a zero for place holders]</b></p>

<p><b>Counters, Dienes and Counters</b></p> <p><b>Partitioning</b> With smaller numbers, children are shown how to partition numbers into tens and ones and then multiply them.</p> 		
<p><b>Counters and Dienes</b></p> <p><b>Grid method</b> Show the link with arrays to first introduce the grid method. <i>Choose sensible numbers and have your model prepared. Children do not need to create the concrete model on their own as it would disrupt the learning. It is important for the children to see the number getting bigger.</i></p>	<p><b>Grid method</b></p>	<p><b>Grid method</b></p> <p>Children are shown how to set up the 10s and 1s in a grid and add the products.</p>

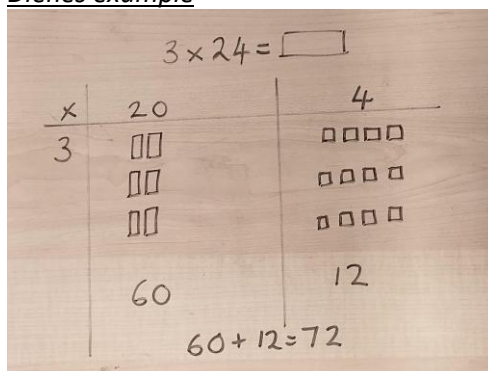

Move onto Dienes to move towards a more compact grid method.

Children can represent their work with counters or Dienes in a way that they understand. They can draw the dienes in different columns to show their thinking as shown below.

Dienes example

$$300 + 24 = 324$$

Year 4

Concrete

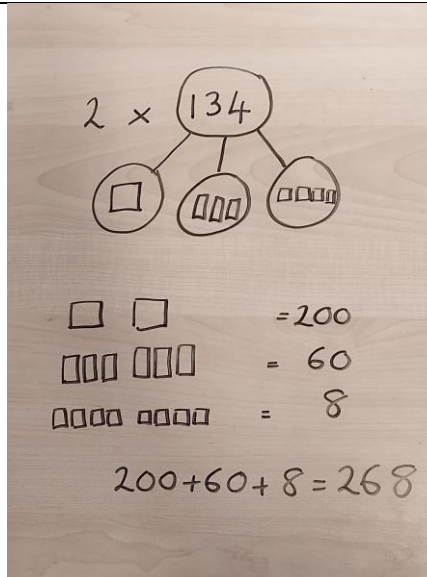

Pictorial

Abstract

## Dienes

### Partitioning

With simple 3 digit numbers, children are shown how to partition numbers into hundreds, tens and ones and then multiply them.

$$4 \times 271 = 1084$$

$$4 \times 200 = 800$$

$$4 \times 70 = 280$$

$$4 \times 1 = 4$$

## Dienes

### Grid method

Recap from Year 3 using Dienes to show how we can multiply using the grid method. We are multiplying by 4 so we need 4 rows of 126.

It is important at this stage that children get into the habit of always multiplying the ones first.

### Grid method

Children can represent their work with Dienes to show their thinking.

#### Dienes example

### Grid method

Children are shown how to set up the 100s, 10s and 1s in a grid and add the products.

$$4 \times 271 = 1084$$

x	200	70	1
4	800	280	4

$$800 + 280 + 4$$

### Expanded column method

Building on the grid method, children are shown how to set up a multiplication with the larger

number on the top. Starting with the 1s, they calculate the product of the 1s and the multiplier and follow on from there.

$$\begin{array}{r}
 \times 253 \\
 \hline
 1518 \\
 3000 \\
 12000 \\
 \hline
 1518
 \end{array}
 \begin{array}{l}
 (6 \times 3) \\
 (6 \times 50) \\
 (6 \times 200)
 \end{array}$$

### Compact column method

Building on the expanded column method, children are shown how to shorten the method.

$$\begin{array}{r}
 \times 253 \\
 \hline
 1518 \\
 31 \\
 \hline
 1518
 \end{array}$$

Year 5

Concrete

Pictorial

Abstract

### Grid method, Expanded column method and Compact column method

Children consolidate their learning from previous years. They continue to use the grid method, expanded and compact column method for multiplying by a 1 digit number.

### Grid method

The children revisit how to use the grid method to multiply by a 1 digit number.

### Expanded column method

Building on the grid method, children are shown how to set up a multiplication with the larger number on the top. Starting with the 1s, they calculate the product of the 1s and the multiplier and follow on from there.

Children can continue to be supported by Counters at this stage of multiplication. This is initially done where there is no regrouping.

$$6 \times 1543 = 9258$$

$\times$	1000	500	40	3
6	6000	3000	240	18

$$6000 + 3000 + 240 + 18 = 9258$$

$$\begin{array}{r} \times 1543 \\ 6 \\ \hline 18 \quad (6 \times 3) \\ 240 \quad (6 \times 40) \\ 3000 \quad (6 \times 500) \\ 6000 \quad (6 \times 1000) \\ \hline 9258 \end{array}$$

### Compact column method

Building on the expanded column method, children are shown how to shorten the method.

$$\begin{array}{r} \times 1543 \\ 6 \\ \hline 9258 \\ \hline 3 \quad 2 \quad 1 \end{array}$$

### Grid method and Compact column method

Children are shown how to use the grid method and the compact column method to multiply by a 2 digit number.

The numbers are becoming too large to be supported by concrete resources.

### Grid method

Children are shown how the grid method can be used when multiplying by a 2 digit number.

		10	8
10		100	80
3		30	24

### Compact column method

Children learn how to use the compact column method multiplying by a 2 digit number.

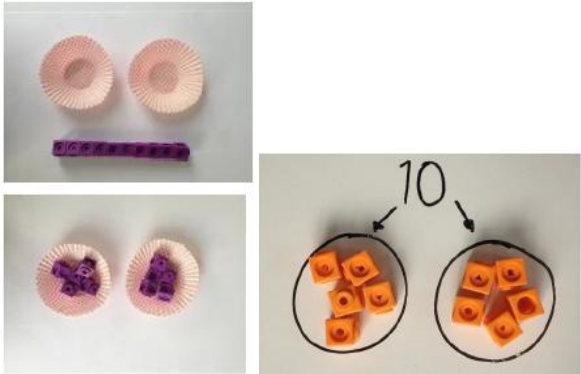

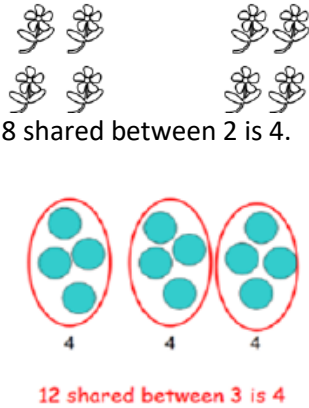

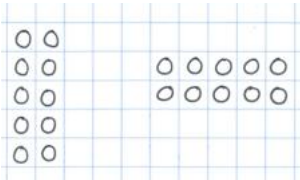

$\times 18$	$\times 1234$
$\times 13$	$\times 16$
$\begin{array}{r} 18 \\ 54 \\ \hline 234 \end{array}$	$\begin{array}{r} 17404 \\ 12340 \\ \hline 19744 \end{array}$

Children learn to see how much is left over.</p> 
Year 4		

## Concrete

### Counters

Use Counters to divide using the bus stop method alongside, starting with no remainders.

Move onto dividing with remainders.

Start with the biggest place value, we are sharing 40 into three groups. We can put 1 ten in each group and we have 1 ten left over.

## Pictorial

Children can continue to use drawn diagrams with dots or circles to help them divide numbers into equal groups.

Children consolidate their learning from previous years. They continue to use the number line with grouping.

## Abstract

Begin with divisions that divide equally with no remainder.

Move onto divisions with a remainder.

We exchange this ten for ten ones and then share the ones equally among the groups.

We look at how much is in 1 group so the answer is 14.

Abstract

Children consolidate their learning from previous years. They continue to use the number line with grouping and the bus stop method.

Children consolidate their learning from previous years. They continue to use the number line with grouping and the bus stop method. These methods can be used to divide by a 2-digit number.

### Long division

Children learn to apply this formal method.

$$684 \div 19 = 36$$

036	19
19   684	38
57 ↓	57
114	76
114	95
0	114
